Although downloading the correct canon printer drivers is necessary for a compatible setup; thus, visit canon.com/ljsetup. The canon.com/ljsetup is the most reliable site to download the correct and updated canon printer drivers.

The Canon printer setup is simple yet a bit of a long process. Due to this, many users find it confusing to perform it. Therefore, you can follow this of canon.com/ljsetup to know how to get the correct canon printer drivers from **ij.start.cannon**. Plus, how to use those drivers to complete the canon printer setup. Although the setup is the same for most printers, some factors differ based on their model and category.

Canon Printer Drivers Download

Again, the apt and correct **canon printer drivers** are necessarily based on the printer model number for a better setup. Otherwise, the wrong software of some other printer can disrupt your setup process, causing you the hassle. Henceforth, follow the below step with attention.

- On your computer or laptop, open a browser. Furthermore, you can use the default browser or try alternative options like Chrome, Edge, and Mozilla Firefox.
- Next, go to canon.com/ijsetup in your browser by typing the same web URL.
- This will take you to a page where you can download the most recent Canon printer drivers and software for your operating system.
- To proceed, select the "Set Up" option from the four alternatives presented.

- You'll be directed to the product page after tapping the "Set Up" button. There, you must select or enter the Canon inkjet printer model number.
- After that, tap the go button to continue.
- Download Canon printer drivers now. The download page opens automatically after you enter your model number.
- After that, go to the "Download" tab. If another prompt appears on the screen, select "Save" or "Save As." After that, your printer software would begin downloading.
- The final step is to install the downloaded driver. Thus, click "Run" after downloading it to install the Canon printer driver. Follow the on-screen directions to finish the **Canon printer setup** installation.

Canon Printer Setup Via USB Cable

Users can connect their inkjet printer wirelessly on a network and on Windows and Mac devices. Furthermore, it can be connected through a USB cord. Also, this is a more effortless way to do the Canon printer setup than the wireless approach. However, make sure your USB cable is between 3 and 5 meters long. The directions below will guide you through the steps.

- To finish the setup quickly, turn on your Canon printer device.
- You can either install the drivers from a CD or get them from the internet. Although, you have to insert the Canon setup CD for this method.
- Now, visit **canon.com/ijsetup** for Canon printer support.
- Select "Set Up" and enter your Canon inkjet model name to get to the download page.
- Now download the Canon printer driver directly from there.
- After that, in the upper right corner, select your operating system. Then click the Download tab in the middle to start downloading Canon printer drivers.
- To begin the configuration, double-click the setup file. The Canon ij setup file will be automatically extracted.
- On the next page, choose the "USB connection" option.
- Next, connect the printer and PC (or laptop) hardware from the USB cord.
- After that, allow access and choose your printer model.
- To complete the USB setup, follow the on-screen instructions. Complete the form, and you are all set up to have premium quality prints.
